

HOW TO CLEAN YOUR **HERMETIC** PRODUCT

Our FIDLOCK® HERMETIC products are not only very useful and durable, but also easy to clean. Regular care contributes to the performance and good appearance of the products, allowing you to enjoy your items even longer. After all, it is possible that white streaks may form on the plastic surface during prolonged use. These are natural residues of starch, as we rely on biological rather than conventional chemical treatment of our foil. To remove those white residues, you can simply wash your FIDLOCK® HERMETIC product. However, please make sure to adhere to the following instructions:

- 1** Washable in a washing machine at 30°C.
- 2** Place a sponge or similar object in the opening of the HERMETIC product between the magnetic strips, allowing the bag to be thoroughly cleaned in- and outside.
- 3** Do not use washing powder, fabric softener, chlorine bleach or all-purpose cleaners.
- 4** Use only a small amount of non-abrasive detergent.
- 5** After the washing process, make sure that the HERMETIC product can dry completely and that there are no moist residues on the inside.
